AMENDED CLAIMS MARKED TO REFLECT CHANGES

AND NEW CLAIMS

64. (Once Amended) An efficient method as defined in claim [65]63 in which said remote site is the client.

65. (Once Amended) An efficient method as defined in claim [66]63 in which said remote site is a commercial printing facility.

70. (Once Amended) A method for emulating Extensible Markup Language (XML) code as described in claim [71]69, wherein the step of transmitting data in an HTML format comprises transmitting data from a client to a server.

73. (Once Amended) A method as described in claim [74]72, wherein the step of rendering the page description file is performed on a client.

74. (New) An efficient method for generating and printing customized documents in a system having a client communicable with a network and a server communicable with the network, the method comprising the steps of:

displaying an interactive form on the client;

receiving user-defined information through the interactive form;

transmitting the user-defined information from the client to the server over the network;

obtaining default document parameters from a template file;

formulating instructions to a page description file builder based upon the default document parameters and the user-defined information;

building a page description file based upon said instructions;

transmitting the page description file to the client;

rendering the page description file for the first time at the client.

75. (New) An efficient method for generating and printing customized documents in a system having a client communicable with a network and a server communicable with the network, the method comprising the steps of:

displaying an interactive form on the client;

receiving user-defined information through the interactive form;

transmitting the user-defined information from the client to the server over the network;

obtaining default document parameters from a template file;

formulating instructions to a graphic file builder based upon the default document parameters and the user-defined information;

building a graphic file based upon said instructions;

transmitting the graphic file to the client;

rendering the graphic file for the first time at the client.

76. (New) An efficient method for generating and printing customized documents in a system having any combination of clients communicable with a network and/or servers communicable with the network, the method comprising the steps of:

displaying an interactive form;

receiving user-defined information through the interactive form;

transmitting the user-defined information over the network;

obtaining default document parameters from a template file;

formulating instructions to a page description file builder based upon the default document parameters and the user-defined information;

building a page description file based upon said instructions;

transmitting the page description file;

rendering the page description file.
